COVER LETTER

Throughout my career, I have been fortunate to take part in diverse roles within IT, communications, and the creative industries, always maintaining a constant process of learning and growth. Thanks to my dedication and commitment, I have consistently met and exceeded objectives, earning promotions and recognition for my work.

In addition to my technical background, I have pursued a parallel professional path in music. Since 2008, I have performed as a musician in various bands and collaborated with multiple groups as a music producer. This experience has not only strengthened my creativity and discipline, but also enhanced my ability to manage projects, work collaboratively, and deliver high-quality results under pressure.

Furthermore, I create digital content on video game development, producing educational and entertainment material across platforms such as YouTube, TikTok, and podcasts. This work has allowed me to combine technical expertise with communication skills, exploring topics ranging from game design and VR to industry trends, while building an engaged community.

These experiences, together with my previous roles in IT, sales, and management, have given me a well-rounded professional profile, strong interpersonal skills, and a unique combination of technical and creative abilities. At present, I am seeking an opportunity where I can contribute meaningfully, continue developing as a professional, and apply this diverse skill set to support the success of any project I join.
